ChangeLog

Version 1.0.2

- (C++) Removed another show-stopper bug when working out how many octets were available during the parsing. Fixed.
- (C++) Added a scoped PDU general include file which includes all PDUs for that namespace. See `suitesmpp/{smpp50,smpp34}/pdus.hpp`.

Version 1.0.1

- (C++) During integration of 1.0.0 with internal products, it was discovered that a less-than sign had been inverted in `suitesmpp::(smpp34/smpp50)::support::parse()`. This made parsing of PDU's impossible if the data length available in the `ByteBuffer` was more than reported by the PDU header. Fixed.

Version 1.0.0

- Initial release
